

# BEN-Africa

The Business Ethics Network of Africa

Strengthening the commitment and competence  
of Africans to do business with moral integrity

# Thought leadership and development trends

## Themes

- Corporate citizenship
- Corporate governance
- Corporate social responsibility
- Education
- Globalisation
- Justice
- Leadership and managerial ethics
- Stakeholder theory
- Sustainability
- Whistleblowing
- Inequality

## Trends

- From the ethical dilemmas in business to **the ethical foundations of business**
- **Ethics, responsibility and sustainability** - from separation to integration
- Business ethics from philosophy departments to **business schools**
- Business ethics in **professional circles and industry dialogues**

# Events and related activities

- **International Society for Business Ethics and Economics** – Shanghai, July 2016
- **KPMG & BEN-Africa Forums:** Johannesburg, Cape Town, Stellenbosch, Port Elisabeth
- **BEN-Africa Conference on Governance and Ethics for African Development** – Stellenbosch, 9-10 Nov 2016
- ABIS Africa **Values-based Leadership** Programme
- An African workgroup on **Responsible Leadership Development and Management Education...**
- **Africa Directors' Programme**

An abstract graphic on the left side of the slide. It features a dark green background with several lighter green curved lines and circles of various sizes, creating a sense of movement and depth.

# Ethics in Technology

“Someone has moved  
the morality of my mouse”

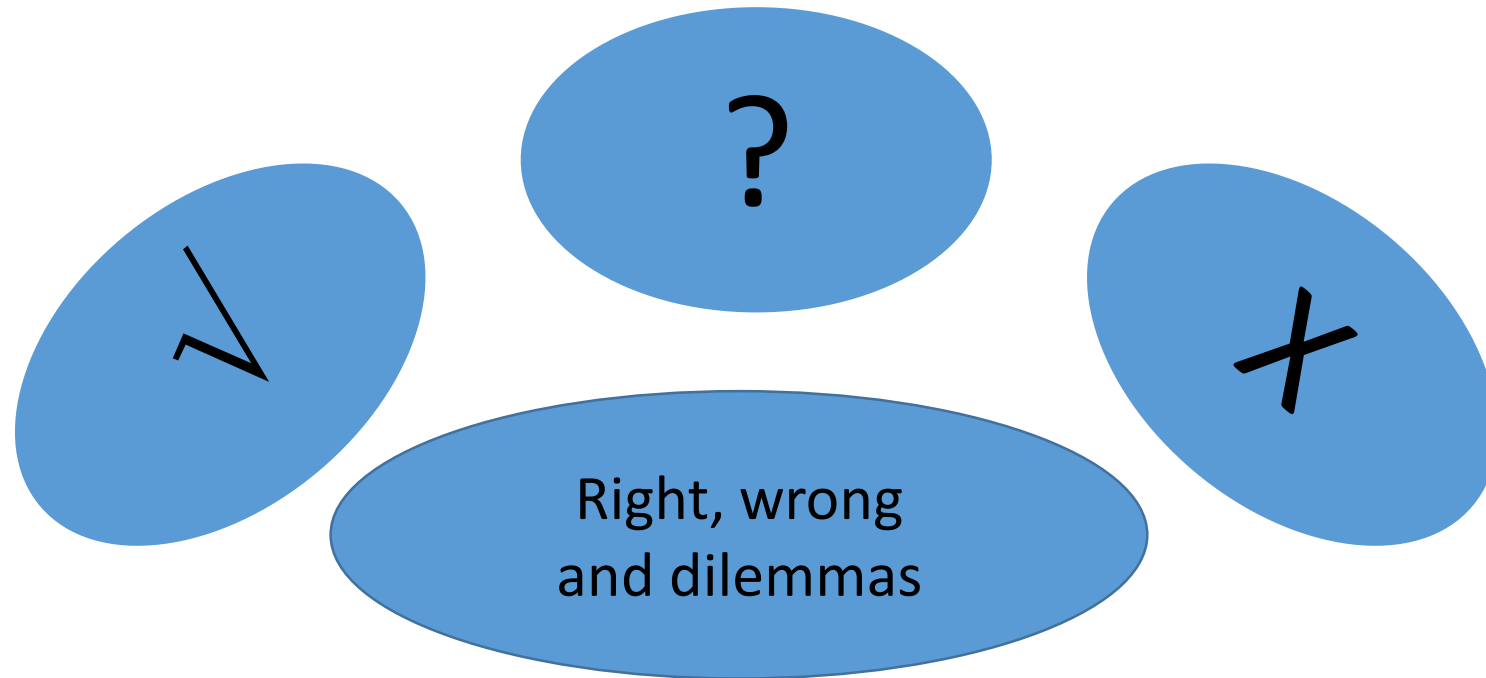

Ethics concerns itself with what is good or right in human interaction.

Ethical questions are asked when there is a conflict of values and to choose between them becomes a problem.

Some of these considerations may be generic to life situations in general whilst others are may be very specifically present within professions or industries.

# The issues in the ICT industry...

- Jeff Relkin:
  - **Privacy:** Does the availability of information justify its use?
  - **Ownership:** What part of an information asset belongs to an organisation and what is simply part of an employee's general knowledge?
  - **Control:** Should employees know the degree to which behaviour is monitored?
  - **Accuracy:** How should responsibility for accuracy be assigned?
  - **Security:** Can system owners be held personally liable when security is compromised?

<http://www.techrepublic.com/article/10-ethical-issues-confronting-it-managers/>

- Debra Littlejohn Shinder
  - Access to confidential data and knowledge about individuals' and companies' networks and systems that give them a great deal of power...
  - The hacker's perspective: whatever you can do you are entitled to...
  - How conscious are we about the ethical consequences of our decisions and actions?

- The **private e-mail** of your network users: Is it OK to read it? What do you do with what you read?
- The **websites** that your users visit: What do you know and what do you do with what you know? Should they know that you know?
- The **directories** of your users: Is it OK to read what is there?
- The **intellectual property** of your corporate user: What do you do with trade secrets? What if you leave and work for the competition? What does loyalty mean?
- **When you bill**: What is a fair price for your services? What about kickbacks/commissions? Inflating your interventions? Compromising on standards?

<http://www.computerworld.com/article/2557944/security0/ethical-issues-for-it-security-professionals.html>

# A dynamic world

It was the year 2000...

# **Some dimensions of the technology impact on ethics**

*“... but he that filches from me my good name  
robs me of which not enriches him ...”*

William Shakespeare  
(Othello)

*“What's in a name?  
That which we call a rose by any  
other name would smell as sweet.”*

William Shakespeare  
(Romeo and Juliet)

# The right to privacy ... *or not?*

More and more information on all of us  
(as consumers) are collected, stored,  
used and shared among organisations

Who *owns* this information and  
should they be allowed to use it?

## Privacy in the Work environment

- Workers can be closely monitored via computer technology
- Many workers consider monitoring dehumanizing...

Rights of workers  
who want their  
privacy

vs

Interests of companies  
that demand to know more  
about their employees

# Drawing the line ...?

- Accessing employees **email** records
- Collecting and using information about employees **web browsing**
- Harvesting telephone numbers, email addresses, credit card numbers and other personal information to build individual customer profiles
- Using physical profiles or personal data and profiling software to match individuals with data
- **Example:** using the wireless security camera to monitor:
  - No go area at night (*security control room*)
  - Pets at home?
  - Workers on a production line?
  - Your children in their classes at schools
  - M.B.A. students in breakaway rooms / writing tests?
  - Knowledge workers every movement behind a PC / laptop

# Online reputation

According to a 2014 survey by [CareerBuilder](#), 51% of employers have disqualified a candidate for questionable content on their Social Media profiles.

Job applicants disqualified based on online information

*Source: Microsoft's 4th Annual Data Privacy Survey*

## Digital divide

- ICT still not affordable for many people
- Children are often victims of this divide – *in SA: Funding for computers at schools and libraries?*

## Games and Internet browsing

- Online games World of Warcraft and EverQuest blamed for a host of problems like poor academic performance, divorce, suicide ...
- Fantasy worlds in online games believed to be addictive and to affect marriages and careers
- Direct relation between time online and depression ...

## The ethical dilemma - Computers in class

- Taking attention away from learning... or,
- An important “back channel” in learning?

## Health issues reported / yet to be conclusively proven:

- Radiation – continued exposure to WiFi / Cellular / ...
- Non natural movement – carpal tunnel syndrome
- Health problems associated with the environment in which ICT is used
  - Vision
  - Skin
  - Reproductive
  - Stress-related

## The ethical dilemma – ICT and health

- Clearly arguments about potential health impact
- Access to relevant medical information saves lives

# WinSenga

## Context

- Millions of babies die annually in Africa, many at birth due to a lack of knowledge of foetal condition

## Idea

- Use 100 year old tech (pinnahorn) to monitor and analyse foetal heart rate

## Do

- Existing 'listening' technology plugs into mobile phone and app is used to analyse and report real time

## Value

- Quality prenatal care with expertise at time of monitoring
- It is mobile – can be used anywhere
- Can be used to diagnose foetal health by 'anyone' with a mobile phone

**WINSENGA - ...BECAUSE ACCESS  
TO EFFECTIVE, QUALITY AND  
AFFORDABLE ANTENATAL CARE IS  
EVERY MOTHER'S RIGHT**

## Efficiency gains through technology

- More efficient resource utilization – more efficient supply chains, saving energy costs, improve the quality of the environment
- Telecommuting means less human movements

## IT Hardware / Software deployments

- Computing that promotes a sustainable environment and consumes the least amount of energy
- Green computing - design, manufacture, use and disposal of computing devices (*computers, servers, monitors, printers, storage devices, networking and ... all equipment*) in a responsible manner

## The ethical dilemma – direct impact of ICT:

- Massive environmental trail of old computer equipment not properly disposed
- Huge savings on energy due to efficient algorithms

**IP** - Protections that involve copyrights, trademarks, trade secrets and patents for 'creations of the mind' developed by people or businesses

- **Industrial property** - Inventions, trademarks, logos, and industrial designs
- **Copyrighted material** - Literary and artistic works; may apply to online materials
- **Trademark** - Protects product name and identifying marks
- **Patent** - protects new processes
- **Cybersquatting** - Registering, selling, or using a domain name to profit from someone else's trademark

## The ethical dilemma

- Pictures and videos makes this slide deck more interesting and keep most students awake...
- Do the lecturer have permission to use these sources, or at least reference?
